Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The first and second (I) bind to epitopes of different antigens (A9). These epitopes are present, after passage through the intestines, in at least some mammals, and have either: (i) their native structure; or (ii) a structure against which an antibody is produced by an animal infected or immunized with (A), or its extract, lysate, derived protein or fragment, or with a synthetic peptide. Practically all mammals display
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a faecal sample with two binding reagents for antigens that survive intestinal passage
The sequences given in AAR52659-60 represent the light and heavy chains respectively of a monoclonal antibody which specifically recognises a specified porphyrin molecule. Using the genes encoding these proteins, the porphyrin antibody can be mass produced inexpensively. Features of the porphyrin monoclonal antibody may be modified, eg. absorption spectrum shift and expression of oxidase activity, by alterations within the coding region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Acid-resistant microorganism; detection; faecal; intestine; infection; monoclonal antibody; heat shock protein; HSP60; light chain.

at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter, whycobacterium and Campylobacter, specifically H. Pylori, H. hepaticus, M. tuberculosis, C. jejuni and C. pylori. (I) may also be used therapeutically. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible degradation of antigens during passage through the intestines. This sequence represents the H. pylori heat shock protein, HSP60-binding antibody (DMS ACC2356) light chain which is used to illustrate the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, antibody, interleukin-6; receptor; IL-6R; light chain; L; H; heavy chain; variable region; mouse; monoclonal; hybridoma; AUK12-20; plasmid; pl2-k2; pl2-h2.

The humanised Ab, or its fragment, specifically binds to carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector or label, is used to treat or prevent CEA-expressing cancers (e.g. of breast, ovary, lung, stomach, or colon) and to detect CEA-expressing calls, either in vitro (optionally on a solid support) or in vivo (particularly by tumour imaging to identify tumours and metastases before surgery), for diagnosis or prognosis. It is not significantly immunogenic, i.e. the Ab does not cytotoxicity, so can be administered repeatedly. It retains specific cytotoxicity, and has improved clearance (allowing efficient targeting) and

antibody. Vectors which additionally contain genes encoding the human constant domains express a chimeric mouse-human antibody. The antibodies are useful in the detection and treatment of cancer. The chimeras should be less likely to cause anaphilaxis than the original murine antibody.
                                                                                                                                                                                                                      Antibody; heavy chain; light chain; variable region; cancer; mucin; hybridoma cell; murine; mouse; pancreatic cancer cell; expression vector; Fv; human; constant domain; chimera; anaphilaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The amino acid sequence of the variable region from the light chain of an antibody against cancer-specific mucin. The coding sequence was isolated from Nd2 hybridoma cells expressing a murine antibody reactive with pancreatic cancer cells. The DNA encoding the antibody variable regions from the heavy (AAQB9833) and light chains were isolated and incovectors. These vectors express the domains as an Evance incladed into vectors which additionally contain genes encoding the human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method of producing humanised immunoglobulins involving expressing in a cell a nucleic acid encoding a humanised version of an immunoglobulin. This is obtained by comparing a donor and human immunoglobulin and producing a combined antibody which contains part of each. These are useful in the treatment of graft-versus-host disease, transplant rejection, autoimmune diseases such as diabetes, rheumatoid arthritis, myasthenia gravis, multiple sclerosis and systemic lupus erythematosus, herpes infections, CMV virus infections demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Humanised immunoglobulin; mouse; human; antibody; heavy chain; diabetes; light chain; graft versus host disease; transplant; autoimmune disease; multiple sclerosis; rheumatrid arthritis; systemic lupus erythematosus; myasthenia gravis; herpes infection; myeloid leukaemia; CWV infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence encoding the variable region of the light chain of the monoclonal antibody 5E8 (specific for the alpha subunit of human gonadotrophin) was amplified for its use in a recombinant vector which also comprised (1) the promoter of the gene for the neutral protease of Bacillus subtilis BGSC 1A341, (2) the secretion sequence described in AAQ17278. The amplified fragment was used to produce a DNA sequence encoding an antibody in single molecule form with the sequence VH/VK-L·VK/VH-(TAG)n, where VH and VK are the variable regions of the heavy and light chains of the antibody and L is the linker of sequence Val-Ser-Ser-(Gly(4)-Ser)3, TAG is a peptide recognised by polyclonal antibodies directed towards the same peptide antibodies which have improved pharmacokinetic properties and can be production of antibodies in completely soluble form with

                                                                                                                           genome encoding a fusion protein. This fusion protein comprises an exogenous protein fused to the amino terminus of a filamentous phage pVII or pIX protein. This is useful in the design of proteins for medical, industrial, environmental and research applications.
                           polypeptide comprising exogenous polypeptide fused to amino terminus of pVII and pIX proteins, for constructing diverse heterodimeric polypeptide array
                                                                                                                                                                                                                                                                          Gaps

The present sequence is the light chain variable region of the murine anti-human glycoprotein (gp) 39 monoclonal antibody (MAb) can member of the murine kappa II subfamily). The MAb was prepd. by immunising a 6-8 week old BALB/c mouse with a gp39-CD8 fusion protein, and 3 days later harvesting and fusing spleen and lymph cells to mouse melanoma cells, to produce an anti-human gp39 MAb producing hybridoma. The MAb may be useful for diagnosing disease states, inhibiting B-cell activation and for treating immunological disorders, e.g. autoimmune disorders, allergic responses, organ rejection and graft versus host disease. It may also be used for imaging cells which express gp39 on their surface, e.g. tumour cells, and to target therapeutic agents to such cells. The MAb inhibits the CD40/gp39 interaction, therefore limiting both prim and sec. responses to T-cell dependent antigens and Ab prodn. Specific to these antigens. A typical compsn. for intramuscular injection pref. contains 50 mg of MAb in 1 ml of sterile buffered

```
The sequence of the light chain variable region from the mouse antibody FB3-2. This sequence was isolated from a variegated display library (VDL) of variable regions derived from a repertoire of antibodies from an immunotolerised animal. The VDL is generated by PCR amplifying the variable regions from the antibody coding sequences using the primers AAQ74153-74. The variable regions, esp the complementarity determining regions (CDRs) see AAR7462-93 for examples of CDRs) from the immunotolerant animals' antibodies are used to construct an antibody against a immunorecessive antigon e.g. a cell surface marker on a foetal, against a immunorecessive antigon e.g. acell surface marker on a foetal, cancer or stem cell, which can differentiate between variant or related forms of the antibodies generated can be used in the diagnosis, e.g. detection of the immunorecessive antigen, or in therapy e.g. of cancer, Alzheimer's disease or familial hypercholesterolaemia. The method of production of the antibody allows rapid and sensitive isolation of antibodies that would be difficult to isolate by standard methods. The antibodies produced have greater binding affinity than the contract of the methods.
                                                                                                                           Generating new antibodies specific for immunorecessive epitopes by selection from variegated V gene library cloned from immuno:tolerance derived antibody repertoire, useful in diagnosis,

Mouse antibody F4-7 light chain variable region protein sequence

Primer; amplification; PCR; mouse; kappa chain; heavy chain; Fab; antibody; immunotolerance; animal; variegated display library; variable region; antigen; immunorecessive; cell surface marker; foetal; cancer; stem cell; variant; therapy; Alzheimer's disease; hybridoma; familial hypercholesterolaemia; binding affinity.

Mus musculus.

WO9515982-A2

15-JUN-1995.

94WO-US14106 08-DEC-1994; 94US-0350400. 93US-0164022. 06-DEC-1994; 08-DEC-1993;

The sequence was isolated from a variegated display library (VDL) of variable regions derived from a repertoire of antibodies from an immunoclerised animal. The VDL is generated by PCR amplifying the cimmunoclerised animal. The VDL is generated by PCR amplifying the variable regions from the antibody coding sequences using the primers AAQ74153-74. The variable regions, esp the complementarity determining regions (CDR; see AAR75462-93 for examples of CDRs) from the immunoclerant animals' antibodies are used to construct an antibody against a immunocrecessive antigen e.g. a cell surface marker on a foetal, cancer or stem cell, which can differentiate between variant or related diagnosis, e.g. detection of the immunorecessive antigen, or in therapy e.g. of cancer, Alzheimer's disease or familial hypercholesterolaemia. The method of production of the antibody allows rapid and sensitive isolation of antibodies that would be difficult to isolate by standard methods. The antibodies produced have greater binding affinity than those produced by combinatorial/hybridoma methods. sequence of the light chain variable region from the mouse antibody by selection from variegated V gene library cloned from immuno:tolerance derived antibody repertoire, useful in diagnosis, Senerating new antibodies specific for immunorecessive epitopes Indels Copeland DP, Hillhouse D, Johnson T; 10; 7; Mismatches Disclosure; Page 80-81; 109pp; English. purifcn. and therapy, e.g. of cancer Best Local Similarity 84.7 Matches 94; Conservative (GENZ ) GENZYME CORP. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Note: the PG1285 and PG4039 sequences are identical
C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap and isulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Reywords: heterotetramer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Title: Rearrangement of genetic information may produce immunoglobulin diversity. C; Ancession: C01937
A; Reference number: A93204; MUID: 79073152
A; Accession: C01937
A; Molecule type: protein
A; Residues: 1-11 (WEL)
A; Residues: 1-11 (WEL)
C; Complex: An immunoquolulin heterotetramer subunit consists of two identical light (hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C; Superfamily: immunoquolulin homology (immunoqlobulin homology C; Superfamily: immunoqlobulin homology (immunoqlobulin homology A/Monain: immunoqlobulin homology (immunoqlobulin homolo
                                                                                                                                                                                                                                                                                                                                         C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C;Superfamily: immunoglobulin V region; immunoglobulin homology C;Keywords: heterotetramer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       submitted to the EMBL Data Library, September 1991
A; Description: Cloning and sequencing of the cDNA coding for the variable regions of
A; Reference number: $24287

                  The present invention describes a filamentous phage encapsulating a genome encoding a fusion protein. This fusion protein comprises an experous protein fused to the amino terminus of a filamentous phage pVII or pix protein. This is useful in the design of proteins for medical, industrial, environmental and research applications.
                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       murine-human anti-carcinoembryonic antigen (CEA) chimeric antibody. Which can be used in in vitro immunoassays for the detection of CEA, and monitoring of tumour-associated antigen during therapy. It can also be used in vivo diagnostically, or in therapy for the treatment of tumours associated with colorectal and breast carcinomas, as well those of the gastrointestinal tract, lung, ovary and pancreas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anti-carcinoembryonic antigen chimeric antibodies - for diagnosis and therapy of carcinoma, e.g. breast or colorectal carcinoma

This sequence represents the murine COLI VK chain (COLIMUVK), and was used to obtain the humanised antibody (Ab) of the invention. The mumanised Ab, or its fragment, specifically binds to carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector or label, is used to treat or prevent CEA-expressing cancers (e.g. of breast, ovary, lung, stomach, or colon) and to detect CEA-expressing calls, either in vitro (optionally on a solid support) or in vivo (particularly by tumour imaging to identify tumours and metastases before surgery), for diagnosis or prognosis. It is not significantly immunogenic, i.e. the Ab does not induce a human anti-murine antibody or allergic response, or non-specific cytotoxicity, so can be administered repeatedly. It retains specificity for CEA, and has improved clearance (allowing efficient targeting) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a humanised version of the murine COL1 VK chain, designated COL1REVK, and was used to obtain the humanised antibody (Ab) of the invention. The humanised Ab, or its fragment, specifically binds to carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector or label, is used to treat or prevent CEA-expressing cancers of breast, ovary, lung, stomach, or colon) and to detect CEA-expressing cells, either in vitro (optionally on a solid support) or in vivo (particularly by tumour imaging to identify tumours and metastases before surgery), for diagnosis or prognosis. It is not significantly immunogenic, i.e. the Ab does not induce a human anti-murine antibody or allergic response, or non-specific cytotoxicity, so can be administered repeatedly. It retains specificity for CEA, and has improved clearance (allowing efficient targeting) and metabolic

```
This sequence represents a humanised version of the murine COL1 VK chain, designated COL1REVK, and was used to obtain the humanised antibody (Ab) of the invention. The humanised Ab, or its fragment, specifically binds to carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector or label, is used to treat or prevent CEA-expressing cancers (e.g. of breast, ovary, lung, stomach, or colon) and to detect CEA-expressing calls, either in vitro (optionally on a solid support) or in vivo (particularly by tumour imaging to identify tumours and metastases before surgery), for diagnosis or prognosis. It is not apinificantly immunogenic, i.e. the Ab does not induce a human anti-murine antibody or allergic responses, or non-specific cytotoxicity, so can be administered repeatedly. It retains specificity for CEA, and humanity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibody; human; carcinoembryonic antigen; CEA; cancer; tumour imaging; tumour identification; metastasis; diagnosis; mouse; VK chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY39544;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    φ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY39544
```

```
sequence is a humanised variant version of the murine COL1 VK chain,
                                                                                                                                                                                                                     designated COLINAVA.

The invention. The humanised Ab, or its fragment, specifically binds of the invention. The humanised Ab, or its fragment, specifically binds to carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector or label, is used to treat or prevent CEA-expressing cancers (e.g. of breast, ovary, lung, stomach, or colon) and to detect CEA-expressing calls, either in vitro (optionally on a solid support) or in vivo (particularly by tumour imaging to identify tumours and metastases before surgery), for diagnosis or prognosis. It is not significantly immunogenic, i.e. the Ab does not induce a human antibody or allergic response, or non-specific cytocoxicity, so can be administered repeatedly. It retains specificity for CEA, and has improved clearance (allowing efficient targeting) and metabolic
